Subject: Application — Fullstack JavaScript Developer (Technical Support & QA)

Dear Hiring Team,

I am writing to apply for the Fullstack JavaScript Developer (Technical Support & QA) position at Conexo. The combination of software development, troubleshooting, quality assurance, and customer support closely matches the responsibilities I have taken on throughout my career.

I am a Full-Stack JavaScript Engineer with over five years of experience building, maintaining, and supporting business-critical platforms for fintech, media, and SaaS organizations. At LRC Group, I currently lead technical delivery for Ride and DTMoney, developing NestJS/Node.js backends, React/Next.js applications, and real-time features while managing P1/P2 incidents, investigating production issues, and ensuring platform reliability.

Previously, I worked as a consultant for XKS Group and Webtinix, delivering more than ten web and mobile applications, including media platforms serving over 100,000 users. Earlier in my career, I progressed from Team Lead to Deputy Technical Director at Webtinix, where I supervised a team of five developers, coordinated project delivery, supported clients, and oversaw deployments and maintenance.

My technical background includes Node.js, React.js, JavaScript, MySQL, PostgreSQL, Linux, AWS, Docker, and CI/CD pipelines. Beyond development, I enjoy diagnosing complex issues, working directly with users, documenting solutions, and continuously improving software quality and stability.

I am comfortable working remotely, collaborating across time zones, and communicating fluently in both English and French. I would be excited to contribute my technical and problem-solving skills to Conexo's global platform and support your customers with reliable, high-quality solutions.

I would welcome the opportunity to discuss how my experience can contribute to your team.

Best regards,

July 3, 2026
